Name: _____ Roll No: _____

For each chart below, answer: What is it trying to tell you? Do you trust it? Why or why not?

Chart 1

Vote Share by Party (14 categories)

Chart 2

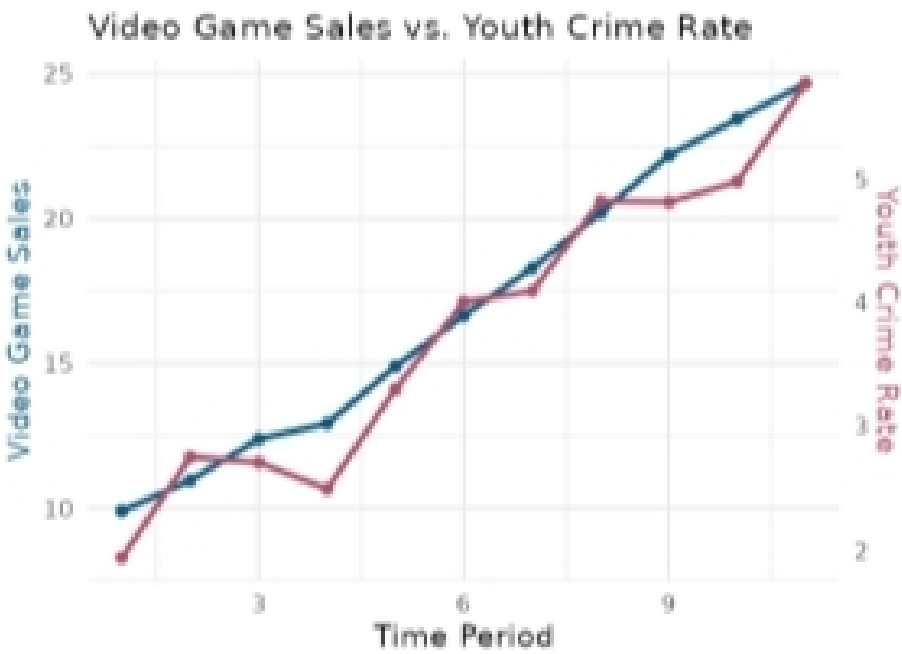

Chart 3

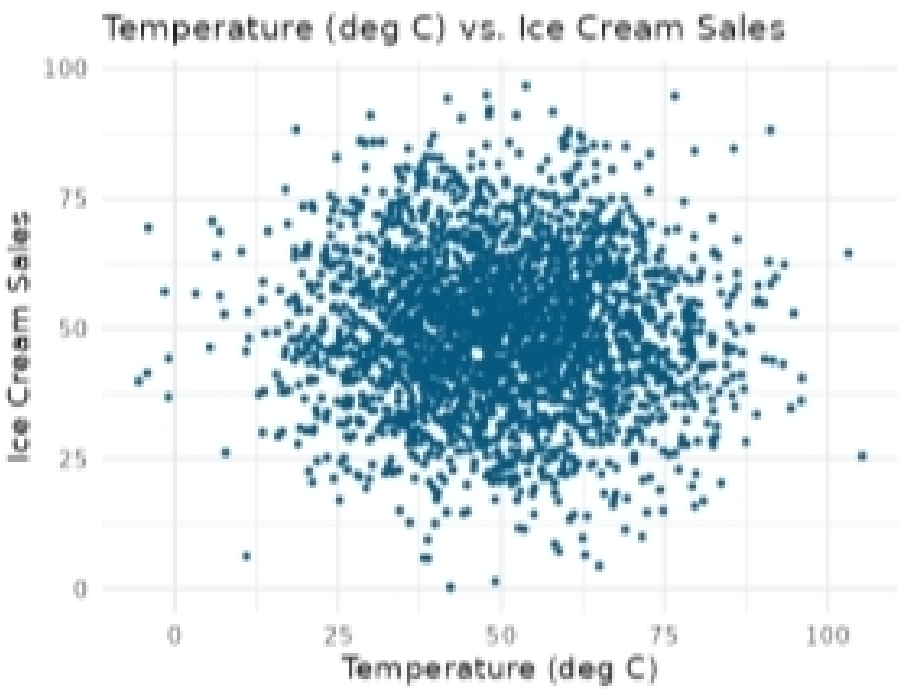

Chart 4

Your notes:

Name: Dinyaseer . M

ACTIVITY

Roll no: 14

Reg No: 192524098

Date: 11/10

Decode the Chart : Chart: 1

What the graph says? (Bar Graph)

- Kolkata and Surat has much higher football than Jaipur and Madurai

Can it be trusted?

No, in the graph, y-axis does not start at 0 and it can exaggerate the actual differences. As

there is only a 10% difference between the bars.

Chart: 2 (Pie Chart)

Vote Share by Party

What the graph says?

It shows how votes are split across 14 parties.

Can it be trusted?

It has different colours for different parties but it cannot be trusted completely as there

is no label of which slice belongs to which party and the gradiency makes it hard to differentiate angles.

Chart: 3 Video Game Sales vs. Youth Crime Rate.

What the graph says?

Video game sales and crime rise together which implies it causes crime.

Can it be trusted?

→ No, it cannot be trusted as simply both video games and crime rise due to major correlation due to population, age, time.

→ And also the x-axis only has time period and no precise ^{units} values are mentioned.

Chart: 4 Temperature (deg C) vs. Ice cream sales

~~No relationship - this chart does not have it~~

What the graph says:

It tells about the ice cream sales during different temperature. but it is baseless as it is just a cloud of dots

- It cannot be trusted as the ice cream sale is increased as the temperature is increased it is not shown

- No units for ice cream

- Physically the temperature 100°C or 75°C is not
