

Redesign the Misleading Colored Chart

R.No: 14 Reg. No: 192524098 Name: Divyasree Muthukumar

Each chart below uses color in a misleading or confusing way. For each one, answer the three questions in your own words.

Chart 1

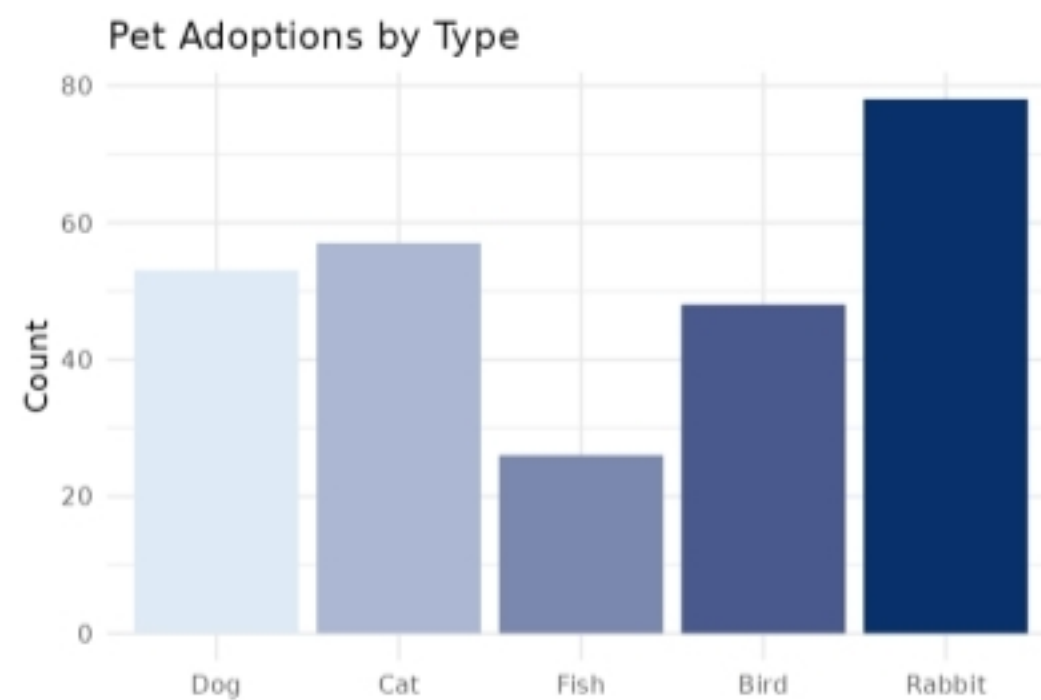

1. What is this chart trying to show?

2. What's wrong with the color choice?

3. Propose a better color scheme (describe it in words):

Chart 2

1. What is this chart trying to show?

2. What's wrong with the color choice?

3. Propose a better color scheme (describe it in words):

Activity - 2

CHART-1 - On-Time vs Delayed Shipments

1. It shows how many shipments were on time and how many were delayed in each of the four groups.

The stacked bars also show each group's total.

2. It uses red and green together, which people with red-green color blindness cannot tell apart. Both colors are also very bright and equally loud, so neither category stands out as the important one.

3. Use a color blind-safe pair that differs in lightness such as dark blue for delayed and light grey or light blue for On-Time. The delayed shipments, which are the key concern, then stand out clearly. Adding count labels on each segment helps too.

Chart-2 PET ADOPTIONS BY TYPE

1. It compares the number of adoptions for each type of pet: Dog, Cat Fish, Bird and Rabbit.
2. Pet type is a category with no natural order, but the chart uses a light-to-dark sequential blue scale. This falsely suggests a ranking from Dog to Rabbit that has nothing to do with the counts. The very light Dog bar also nearly blends into the white background.
3. Use one solid color for all bars, since the x-axis labels already name each pet and sort the bars from highest to lowest. If colors are needed use a qualitative color-blind-safe palette with distinct hues of similar brightness, so no pet looks more important than another.
